SECTION MEETINGS PROGRAM

HIGHER SCHOOL OF ECONOMICS
NATIONAL RESEARCH UNIVERSITY

With participation of the World Bank

Moscow, 2016

Dear Colleagues!

On 19–22 April 2016, the XVII April International Academic Conference on Economic and Social Development will take place in Moscow, being held by the National Research University Higher School of Economics with support of the World Bank.

This year, we decided to change slightly our traditional format of the large plenary sessions, having transformed them into the hour-and-a-half ones on relevant issues, featuring experts, as well as the public authority, business and civil society representatives. There will be discussions on a variety of themes such as macroeconomics, financial markets, budget, social policy, health protection, migration, education, technological challenges and innovations, business and law, values and social structural changes, agriculture, etc.

As for the sectional program of the Conference, it will be diversified as usual. By the time being, the conference program has 46 sections, in identifying which almost all Latin alphabetic letters are used.

Among the honorary guests of the Conference are Professors: Gerard Roland, University of California, Berkeley, Timur Kuran, Duke University, Daniel Treisman, University of California, Peter Strohschneider, President/German Research Foundation, Ronald Inglehart, University of Michigan, Richard Murnane, Harvard University, and many others.

To hold a special seminar jointly with the European Association for Comparative Economic Studies (EACES) is going to become a tradition. This time its topic is “Russian Businesses in Comparative Prospect.” This year, two PhD seminars on Finance and Management are planned within a framework of the Master program of the Conference.

It has already become a tradition to present the Gaidar Award for young economists within a framework of the Conference, established by the Yegor Gaidar Foundation and designed to promote the Russian economic science development and encourage the integration of the young Russian scientists into the global academic community.

This year, the ceremony of the presentation of the National Award in Applied Economics will take place, handed out every other year for the outstanding published papers dedicated to the analysis of the Russian economy at the country, sectoral and regional levels, or at the level of certain businesses.

I wish you all interesting discussions!

Chair of the Program Committee
E. Yasin

A handwritten signature in blue ink, appearing to read 'E. Yasin'. The signature is fluid and cursive, with a large initial 'E' and a long, sweeping tail.

SECTION MEETING PROGRAM

Section A. Special Sessions and Round Tables

19 April,
Tuesday

12:00–13:30
Room 311,
M-20,

ENG 

Session A-02

Honorary paper by Professor Dr. Peter Strohschneider (President, German Research Foundation) “New ‘New.’ On Some Paradoxes of Science Organization”

Moderator: **L. Gokhberg** (HSE)

Peter Strohschneider was born in Stuttgart in 1955. He is the President of the Deutsche Forschungsgemeinschaft (DFG, German Research Foundation), the central self-governing organization for sciences and the humanities, which promotes research in universities and other publicly funded research institutions in Germany. He studied German philology, as well as law, history, sociology and political science, and received his PhD from the Ludwig-Maximilians University (LMU) in 1984. He was Professor of German Medieval and Early Modern Studies at Dresden University of Technology from 1993 until 2002. Since 2002 he has held the chair of German Medieval Studies at the LMU in Munich. His research foci lie in the fields of German medieval and pre-modern culture and literature, as well as academic research policy. He was a visiting professor at the École Pratique des Hautes Études in Paris, the Freiburg Institute for Advanced Studies and the Goethe University Frankfurt/Main and declined calls from the University of Tuebingen and the Freie Universität Berlin. From 2006 to 2011 he chaired the German Sciences and Humanities Council (Wissenschaftsrat). He is a member of numerous international committees and academies, including the Bavarian Academy of Sciences and the Academia Scientiarum et Artium Europaea.

17:00–18:30
Room 518,
M-9/11

RUS, ENG 

Session A-04

Round table “25 Years of Reform”

Moderator: **A. Chubais** (“Rosnano”)

Questions

- The results of market economy organization
- Privatization: Pros and cons
- Civil society and traditions of despotism
- Current situation and prospects of development

Participants: **Y. Urinson** (“Rosnano”), **A. Nechaev** (PRUE), **A. Klepach** (VEB), **A. Auzan** (MSU), **V. Mau** (RANEPa), **D. Zimin** (VimpelCom), **D. Treisman** (University of California, Los Angeles)

20 April,
Wednesday

17:00–18:30
Room 309,
M-20

Session B-10

Round table “Russia’s Economic Trends and Outlook”
Moderator: **B. Hansl** (World Bank)

Questions

- Which observed economic trends surprised you in the last half year of 2015 and the first quarter of 2016?
- What do you see as the key policy challenges for Russia’s outlook for 2016–2017?
- Do you think the relative price advantage for Russian producers and exporters is more than temporary?
- What else would need to be in place for Russian producers and exporters to realize the benefits of a weaker ruble?

Participants: **M. Oreshkin** (The Ministry of Finance of the Russian Federation),
A. Morozov (Bank of Russia), **G. Di Bella** (IMF), **N. Orlova** (Alfa Bank)

15:00–16:30
Room 101,
M-20
RUS, ENG 🗣️

Session B-11

Honorary paper by Victor M. Polterovich (CEMI RAS, MSU) “Evolution of Competition, Authority, and Collaboration”

Moderator: **E. Gurvich** (EEG)

The hypothesis is discussed that the evolution of modern developed societies leads to a decrease in significance of institutions of authority and competition mechanisms; instead, the role of positive (not directed against third parties) collaboration increases. The grounds of this process are technical progress, and most importantly — cultural changes: the spread of tolerance, cosmopolitanism and altruism, increasing the radius of trust, internalization of honesty norms and, therefore, mitigation of free-riding problem. As a consequence, collectivism and individualism in their extreme forms are replaced by the culture of constructive collaboration and compromise. Thereby the failures of the state and the market as well as parliamentary democracy are gradually being overcome.

To ground the basic hypothesis, I consider three areas where recently the competition or the authority institutions dominated — the spheres of international relations as well as internal political and economic interactions. The evolution of legislation on bankruptcy and antitrust laws are discussed as well as competition effects, changes in the political systems in developed countries (consensus democracy by Arend Lijphart, the role of parliamentary committees), the emergence of international institutions, the role of civil society. It is shown that in the long-term evolution, the contradictions of the competitive and the state coordination mechanisms gradually softened, but not only and not so much due to their rational combination, but because of the increasing role of collaboration.

The described transformation increases the effectiveness of institutions: the scope of coercion, inevitably generated by the state institutions and also by the institutions of unrestricted competition, is being reduced, and targets of interactions are being achieved at lower costs. It concerns the reduction not just material, but also socio-psychological costs due to expanding possibilities of collaboration in the framework of moral norms (including the golden rule), that are widely recognized in modern societies.

Actual Problems of Practical Statistics in Russia and Abroad

Session moderator: **A. Ponomarenko** (HSE)

A. Ukolova (Russian State Agricultural University)

Summary and Analyses of Agricultural Censuses: The USA Experience

O. Kuchmaeva (HSE)

Opportunities of Statistics in the Evaluation of the Impact of the National Strategy for Children in Russia

I. Antokhonova (ESSUTM)

Statistical Analysis of Restrictions of Development of the Regional Social and Economic Complex

D. Plekhanov (ICSS)

Critique of the Official Statistics of China: Appraisal of the Pros and Cons

15:00–16:30
Room 328,
M-9/11
RUS

Session C-03
Regional and Sectoral Aspects of the Analysis of Statistical Information

Session moderator: **V. Mkhitaryan** (HSE)

V. Arefeva (Russian State Agricultural Academy)
Justification of Insurance Tarrifs for Agricultural Crops on the Basis of Research Data in the Long-Term Field Exprimnt at Russian State Agrarian University-Moscow Timiryazev Agricultural Academy

M. Simonova (MGIMO)
OECD Structural Study: Sectoral Aspects in the Analysis of Markets for Goods and Services

A. Bulkina (NSUEM)
Research of Intraregional Differentiation of Socio-Economic Development of the Russian Federation and of the European Union

J. Romantseva (Russian State Agrarian University)
Statistical Analysis of the Distribution of Agricultural Production by Types of Farms (Regional Aspect)

17:00–18:30
Room 328,
M-9/11
RUS

Session C-04
The Use of Statistics for Empirical Economic Analysis

Session moderator: **O. Kuchmaeva** (HSE)

M. Kagirova (Russian State Agrarian University)
Statistical Research of Regional Peculiarities of Livestock Production in Russia

A. Tikhonova (Russian State Agrarian University)
Development of the Methodology of Statistical Research of Taxation (for Example, Agriculture)

V. Krylov (UISU), **V. Gorbunov** (UISU)
Efficient Funds and Their Assessment by the Production Function Method

G. Popova (TSTU)
Paradoxes of Growth of Tax Revenues and Labor Productivity

Section D. Theoretical Economics

Moderators: **A. Zakharov** (HSE), **S. Izmalkov** (NES)

19 April,
Tuesday

Session D-02
Economic Behavior
Session moderator: **N. Arefiev** (HSE)

12:00–13:30
Room 423,
M-9/11
RUS

N. Korgin (ICS RAS), **V. Korepanov** (ICS RAS)
Comparative Analysis of Resource Allocation Mechanisms Based on Experiments in the Form of Business Games

Y. Avtonomov (HSE), **E. Elizarova** (HSE)
Behavior and Expectations in a Trust Game: An Optimism Bias?

N. Arefiev (HSE)
Rational in Attention vs. Full Information: Evidence from the US Aggregate Data

15:00–16:30

Session D-03
Microeconomic Equilibrium
Session moderator: **A. Filatov** (ISU)

L. Polischuk (HSE)
Signaling via Collective Action: A Dynamic Perspective

I. Andrievskaya (HSE), **M. Semenova** (HSE)
Does Biological Endowment Matter for Demand for Financial Services?
Evidence from Russia

A. Filatov (ISU)
The Heterogeneity of Firms Behavior at Oligopolistic Market: Price-Makers
and Price-Takers

P. Bonev (CERNA, Mines ParisTech), **M. Söderberg** (University of Gothenburg),
M. Glachant (CERNA)
Spatial Price Homogeneity as a Mechanism to Reduce the Threat
of Regulatory Intervention

17:00–18:30
Room 423,
M-9/11
RUS, ENG 

Session D-04/1
Social Choice Problems
Session moderator: **A. Subochev** (HSE)

S. Mustafaeva (FU)
A New Way of Coordinating Interests Actors (Shareholders, Investors, Managers,
and Others)

E. Dogan (HSE)
An Egalitarian Solution to Minimum Cost Spanning Tree Problems

R. Dubey (Montclair State University)
On Social Welfare Orders Satisfying Pigou — Dalton Transfer Principle

A. Subochev (HSE)
On the Possibility of Implementation of a New Social Choice Correspondence —
the Union of Minimal Externally Stable Sets. On Its Other Useful Properties
and Possible Applications

17:00–18:30
Room 311,
M-20
RUS, ENG 

Session D-04/2
**Honorary lecture of Gérard Roland (University of California,
Berkeley) “The Evolution of Post Communist Economic Systems”**
Moderator: **V. Polterovich** (CEMI RAS, MSU)

In this lecture, I will propose a new conceptualization of transition processes in Eastern
Europe versus China.

I argue that with the perspective of time, transition outcomes in Central and Eastern Europe better understood by the dynamics of state erosion started under communism rather than by particular transition policy choices. Post-communist states, while being autocratic or imperfectly democratic, are very different from the communist monopoly of power that existed under the socialist system. They have become a turf war for kleptocratic networks for the purpose of corrupt enrichment. Reforming post-communist kleptocratic states to establish high quality institutions is a new and very different challenge from the transition away from the communist state and the socialist economy.

The case of China is very different. China made a major institutional innovation in world history: establish a successful market economy under absolute communist rule, with the goal of consolidating the power of the Chinese communist party. The Chinese system faces specific survival challenges in the future (ideological vacuum, corruption, external environment), that I will review, but there are few hopes of major political reform in the short and medium run.

Session D-09
Honorary lecture by Hervé Moulin (Adam Smith Business School at the University of Glasgow, HSE — St. Petersburg) “Fair Division in the Internet Age”

Moderator: **F. Aleskerov** (HSE)

The Internet is just starting to provide free websites implementing sophisticated microeconomic answers to (a handful of) concrete allocation problems. The most popular site, Spliddit (<http://www.spliddit.org/>), in the development of which I am involved, applies for instance the Shapley value to split a taxi fare with multiple destinations. To assign credit for a joint venture (e.g., a multi-authored article), it uses the “impartial” division method I invented, where one’s ballot about the relative shares of other agents cannot influence one’s own share.

I will focus on very recent theoretical advances in the classic problem of *fairly* dividing valuable objects without the help of a benchmark “market price.” Think of family heirlooms among siblings, shifts among interchangeable workers, seats in overbooked classes to students, or computing resources in peer-to-peer platforms. It is feasible to elicit additive utilities from the participants, but more complex messages are not realistic. It turns out that the allocation maximizing the Nash product is together compellingly fair, easily computed, and provides little incentives to strategic misreport of preferences. It is about to be offered for free on Spliddit.

Surprisingly, this compelling rule to divide *goods* has no counterpart when we divide *bads*, or when each agent must receive a fixed total quantity of commodities. More research is needed to provide sound advices in those important cases.

Session Dc-05

Honorary lecture by Stanley Wasserman (Indiana University, HSE) "Network Research in Russia: Progress and Prospects"

Moderator: **V. Kuskova** (HSE)

Networks are everywhere. They are important, because they enhance existing theoretical knowledge in any field by providing tools of analysis to relational data — that is, market functioning, organizational problem-solving, and changes that take place on the societal

level. This is because networks allow looking beyond the individual attributes of organizational, market, and societal players by building complex webs of relationships and information flow between them. The field of networks is truly multidisciplinary, as many social fields are interconnected and should be studied in parallel using the same instruments.

The purpose of this presentation is to acquaint the broader community of HSE and visiting academics with network research done on Russian data at NRU HSE International Laboratory for Applied Network Research. The team of approximately 30 young scientists from a diverse set of fields have been working for the past 2 years on a variety of problems, united by common methodology of network science. This presentation will provide a broad overview of research done by the lab, some peculiarities inherent to Russian data collection, encountered by our team, and insights from analysis that appears to be unique for the Russian sets of data. We will also address currently unresolved issues and outline directions for future research.

Session I-05

Keynote lecture “What we Learnt from the Russian Experience during the Global Financial Crisis: A Corporate Governance Perspective” by **Ichiro Iwasaki** (Institute of Economic Research, Hitotsubashi University)

Moderator: **A. Yakovlev** (HSE)

The global financial crisis of 2008 struck not only developed economies but also Russia, which had been promoting economic integration with the world economy in pursuit of the shift from a planned system to a market economy. This experience provides an important opportunity to study how Russian corporations are stalwart against an external macroeconomic shock and the role and evolution of corporate governance system in a crisis period. In this presentation, I will address to two issues from this viewpoint. First, how many Russian firms were forced to exit from the market by the global financial crisis and how did corporate governance quality affect firm survival during the period? Second, how did surviving firms evolve their governance system in the crisis? My study relies on results of an enterprise questionnaire survey conducted in 2005 in cooperation between Higher School of Economics (Moscow) and Hitotsubashi University (Tokyo) and its follow-up survey in late 2009.

I will report that the vast majority of exiting firms were forced to discontinue operation during the 2 years of 2008 and 2009, and the quality of the corporate governance system observed in 2005 had a statistically robust and positive correlation with the company's subsequent survival probability. Furthermore, I will mention that my empirical analysis revealed that, in the Russian industrial sector, the quality of corporate governance has been improved through the crisis. I will also argue that, corresponding to the alignment hypothesis, in firms that decisively reformed their management and supervisory bodies in response to the 2008 financial shock, the total number of worker representative directors significantly declined, as did their proportion to all board members. On the other hand, I will also report that, in firms that substantially reorganized their audit system to cope with the crisis, the independence of the audit system was undermined remarkably, corresponding to the expropriation hypothesis.

Session M-02
Honorary paper by Steven Fish (UC Berkeley, USA) “Political and Civil Society in Russia in Comparative Perspective”
Session moderator: **A. Melville** (HSE)

Why are political parties, civil society organizations, and social movements weakly developed in Russia? Since the Russian polity began opening in the late 1980s, independent societal associations have emerged. Those groups are real; they don't resemble their counterparts in the West, but are not for that reason less genuine. Still, unlike in many other countries that have undergone political opening in recent decades, independent organizational life has never flourished in Russia. In the absence of a strong party system, civil society, and social movements, politics in Russia remains largely an elite matter. Why is Russian society relatively inarticulate and underdeveloped?

Session M-10

Honorary paper by Deniel Treisman (University of California, Los Angeles) "What Makes Governments Popular?"

Moderator: N. Petrov (HSE)

Why are some governments popular with their citizens while others get low ratings? International surveys show enormous variation. In Bhutan in 2014, for example, 89% of respondents said their national authorities were doing a good job. In Bosnia and Herzegovina that year, only 5% said the same. Ratings vary not just across countries but also over time. Between 2008 and 2014, approval of top leaders fell by 42 percentage points in Armenia, but rose by 40 points in Zimbabwe.

Understanding the causes of such variation is important for several reasons. First, it offers insight into the mechanisms of democratic responsiveness. To hold their governments accountable, citizens must be able to assess their performance. If citizens' evaluations track actual government effectiveness, then elections may both motivate incumbents to work hard and select for competence. If, by contrast, citizens are swayed by superficial images or state propaganda, elections will not promote responsive government.

Second, leaders' ratings provide hints about the future. This is true in both democracies and authoritarian states. In democracies, the incumbent's poll numbers suggest the odds of reelection. The ratings-obsessed democratic politician has become a cliché. Such officials may change their policies when falling in the polls. Low approval may also prompt challenges to the leader from within his own party. In systems where election dates are discretionary, popular incumbents may call an early vote hoping to cash in their advantage.

The leader's ratings might seem less important in authoritarian and hybrid regimes, which are usually thought to depend on repression rather than on consent. In fact, in some dictatorships ratings matter even more than in democracies. It is not always true that force can compensate for low approval — sometimes; low approval makes it hard to use force. To do so, the dictator must rely on his police and security service. But officers may hesitate to follow orders if they think the regime about to fall. As Arendt (1969) put it: "Where commands are no longer obeyed, the means of violence are of no use. Hence obedience is not determined by commands but by opinion, and, of course, by the number of those who share it."

The belief that a leader is loved can silence potential critics, creating a self-fulfilling faith in the regime's stability. Conversely, low ratings may suggest vulnerability, encouraging opportunistic attacks and elite defections. In postcommunist Russia, presidents' support among regional governors and parliamentary factions waxed and waned with their approval numbers. And the threat may be more immediate in systems where leaders are removed from office by coup or revolution rather than electoral defeat. An unpopular leader in a democracy must worry about replacement at the next election; an unpopular dictator needs to worry about it every day.

For these reasons, authoritarian leaders sometimes seem *more* obsessed with polls than their democratic counterparts. Some invest heavily in their own surveys. General Pinochet hired Gallup in the late 1970s to question the Chilean masses. President Salinas of Mexico set up three separate polling agencies to serve the ruling PRI party, the president's office, and the government newspaper, while also appointing fulltime pollsters to his staff. Poland's Communist leaders in the 1980s, reluctant to rely on secret police reports, commissioned multiple surveys to test the effectiveness of martial law.

Besides providing hints of future leader or regime change, approval ratings affect the incumbent's ability to achieve his goals. High poll numbers constitute a form of "political capital" that can be "spent" on enacting policies. In the US, popular presidents can better determine the agenda and enlist Congress's backing. A similar logic applies in some authoritarian and hybrid systems. Lacking an organized political party, Peru's President Fujimori "used public opinion polls to fight his opponents in Congress and gain political momentum."

This paper is, we believe, the first systematic, global, comparative study of political approval. We examine a panel of country averages from up to 128 countries, spanning all continents, over the years 2006–2014. Our source, the Gallup World Poll, uses a standard question to assess government approval and includes a variety of other useful measures of opinion and attitudes. The availability of data for up to 9 years makes it possible to control for fixed country characteristics and explore the dynamics of approval in a global setting. Although we cannot make strong causal claims, the broad coverage and panel structure allow for the most comprehensive and detailed picture of this phenomenon to date.

We explore, among other questions: the impact of economic conditions, wars, and other plausible determinants of leader popularity; whether patterns of government approval differ in democracies and non-democracies; and the role of propaganda, censorship, and political repression on the expression of approval and disapproval.

Session N-06

Honorary paper by Lester M. Salamon (The Johns Hopkins University, Maryland, HSE) “Beyond Nonprofit Organizations: Toward a Reconceptualization of the Third Sector”

Session moderator: **V. Benevolenski** (HSE)

The idea a “third sector” outside the arenas of the state and the market is probably one of the most perplexing concepts in modern political and social discourse, encompassing as it does a tremendous diversity of institutions and behaviors that only relatively recently have been perceived in public or scholarly discourse as a distinct sector, and even then with grave misgivings. Initial work on this concept focused on what is still widely regarded as its institutional core, the vast array of private, nonprofit institutions and the volunteer as well as paid workers they mobilize and engage. These institutions share a crucial characteristic that makes it feasible to differentiate from for-profit enterprises: i.e. the fact that they are prohibited from distributing any surplus they generate to their investors, directors, or stakeholders. Many European scholars have considered this conceptualization too narrow, however, arguing that cooperatives, mutual societies, and, in recent years, “social enterprises” as well as individual activities taking place outside of institutions should also be included. This presentation will discuss a consensus re-conceptualization of the “third sector” that embraces at least a subset of this broader array of institutions and behaviors while still differentiating them clearly from other sectors.

Session O-05/1

Honorary lecture by Robert Kramer (National University of Public Service) “Transformative Action Learning”

Moderator: **A. Barabashev** (HSE)

This workshop is for anyone who wants to explore how to implement a form of problem solving, leadership development and knowledge management called “transformative action learning.”

Transformative action learning is a tool that has an extraordinary capacity to help managers get powerful results. Transformative action learning promotes team building, leadership, creativity, group emotional intelligence, practical solutions and organizational learning.

Transformative action learning involves real people resolving and taking action on real problems in real time and learning while doing so. Transformative action learning makes inquiry and reflection central to the group as members learn with and from each other while attempting to change the organization.

In transformative action learning, group members question their own mindsets as well as the basic taken-for-granted assumptions of the organizational culture. The change implemented in the organization is termed “action” and the change in the mindset, assumptions and beliefs of group members is termed “transformative learning.”

Transformative action learning has been widely adopted by Fortune 100 companies, the US Government, and the European Commission as the preferred method for solving urgent problems, building teams, developing leaders and changing organizational culture.

I will demonstrate how transformative action learning can turn urgent problems or challenges into actions, new ideas and creative thinking.

Session O-09

Public lecture by Ali Farazmand (Florida Atlantic University)

on "Advancing Knowledge and Expanding Horizons in the XXI Century: What the Global Encyclopedia of Public Administration, Public Policy, and Governance, As Well As IJPA and Public Organization Review Can Do"

Session moderator: **T. Nezhina** (HSE)

XXI century is the century of globalization and global knowledge explosion. Globalization has many meanings and interpretations with different implications and consequences, good, bad, and ugly. It has had profound implications with serious challenges for developing and developed nations, their governance and public administration systems. Knowledge is power and power is essential to governance and public administration. Advancing knowledge is the key to building capacity and meeting the challenges of globalization; it expands the horizons of possibilities and opportunities worldwide.

This presentation addresses the world's largest *Global Encyclopedia of Public Administration, Public Policy, and Governance*, with the initial 2000 entries (short/2000–3000 words; medium/3000–5000 words, and few long/5000–10,000 words) to be published online in print by Springer in 2017–2020, and with the ultimate goal of 5000 entries by 2022–2025, to continue with new editions. The Encyclopedia covers over 60 sections, subsections, and all geographical areas and countries of the world with over 100 section editors and co-editors. As Editor-in-Chief of the *Global Encyclopedia* and Founding Editor-in-Chief of *Public Organization Review: A Global Journal (POR:GJ)*, Professor Farazmand cordially invites new section editors for the growing sections and areas of the Encyclopedia and authors for a large of number new entry topics to expand this truly global source of advancing knowledge and expanding horizons into the broad areas of public administration, public policy, and governance. While the *Global Encyclopedia* publishes short, medium, and long entry essays, *Public Organization Review: A Global Journal (POR:GJ)* publishes peer reviewed high quality standard articles. Springer is the publisher for both publications. Also, as Editor-in-Chief, Professor Farazmand seeks high quality manuscripts for the referred *International Journal of Public Administration (IJPA)*, which has begun a new life as of 2016 with a newly streamlined and highly engaged and rigorous editorial board, a focus on high quality manuscripts & publication, a tightened acceptance rate, an IFirst publication online of newly accepted manuscripts.

Session Ra-13

Honorary lecture by Wesley J. Johnston (Georgia State University)

"The Internet of Things and Its Effect on Big Data and Business Analytics"

Session moderator: **O. Tretyak** (HSE)

New digital business ecosystems are emerging mirroring business networks and information flows. At the bases of these ecosystems are smart sensors that collect, receive and send real-time information through the Internet into a platform that underpins B2B information requirements and services. This collective of sensors — the "Internet of Things" (IOT) — is expanding at an explosive Cambrian level with estimates connecting to the Internet varying wildly from Cisco's official estimate of 1 bn at the end of 2012 to over 27 bn by 2020, compared to TSensors Summit, estimates of over 10 bn sensors in 2013, growing to over 1 trln sensors to be connected to the Internet by 2022! Sensors may be found in almost everything by 2020 and will generating huge streams of data — Big Data. Frameworks for defining and classifying big data are emerging including IBM's four V's framework (volume, variety, velocity and veracity). Marr added a fifth V to the IBM framework — value.

A B2B digital business ecosystem is outlined including real business value creation ecosystem and digital ecosystem with IOT, Big Data, and information services platform,

layers — and interactions by B2B actors (human and increasingly becoming digital) to produce products, services, ideas and activities. Data science is emerging focusing on capture, curation, analysis and use of Big Data streams. Datafication includes Big Data and value creation. The IOT underpinning B2B services was outlined by Sood & Pattinson, and Big Data for B2B value creation by Johnston, Nickell, Liu & Gould. Discussion on the emerging area of marketing data science (in a B2B context), B2B digital business ecosystems and how far they may go in terms of imitation or taking over of real value creation system is presented at the end of the paper.

Session Tb-08
Honorary lecture by Michael Sollogub (Paris 1 Panthéon Sorbonne University) “The Inequality in Income Distribution in Russia and Worldwide — Lessons from 40 Years of History”

The paper provides a history that highlights the return in Economy science of the analysis of inequality in income distribution. The main reason for this return — a strong increase of inequality in many countries of the world after a long period of contraction. However, this result is not so easy to achieve, just because the Lorenz curves of distributions are too difficult to build, therefore it is difficult to apply the Atkinson theory (if the Lorenz curve of income distribution A is located entirely within the curve B, then the distribution A is more equal than distribution B); otherwise it is always possible to find a function of social utility, which would rank the distribution of these uncertainties (i.e. sometimes A more even than B, and sometimes vice versa, depending on plausible method of measurement of inequality).

The paper gives the results of measurements of inequality in the world and in Russia in recent years. Application of Atkinson theory is difficult due to the unavailability of comprehensive data, but the overall picture is clear: everywhere in the world we are witnessing the deterioration of the situation of inequality in income distribution. For the measurement it is necessary to use the sampling data.

Session Te-01a
Honorary lecture by Ronald Inglehart (HSE, University of Michigan) “Reshaping Human Motivations and Society, 1896–2014”
Moderator: **E. Ponarin** (HSE)

Rising levels of economic and physical security are reshaping human values and motivations, and thereby transforming societies. Basic values tend to be instilled during one's pre-adult years and persist in later life. But if a society's younger birth cohorts grow up under fundamentally different conditions from those shaping older cohorts, the society's prevailing values can change, generally at the glacial pace of intergenerational population replacement.

Economic and physical insecurity are conducive to xenophobia, strong in-group solidarity, authoritarian politics and conformism to traditional cultural norms. Conversely, secure conditions lead to tolerance of outgroups openness to new ideas and more egalitarian social norms. Consequently, the rapid economic growth and expanding welfare states experienced by developed societies after World War II brought an intergenerational shift from emphasizing economic and physical security above all, toward greater emphasis on free choice, environmental protection, gender equality and tolerance of gays. This contributed to major societal changes such as the legalization of same-sex marriage and a sharp increase in the number of democracies around 1990. Subsequent economic stagnation, rising inequality and high unemployment have retarded this value shift, encouraging growing xenophobia and authoritarianism. Nevertheless, acceptance of gender equality and homosexuality has become socially desirable attitudes in secure societies and continue to spread rapidly.

Session Te-04a

Andranik Tangian (WSI, Germany) "Decreasing Labor — Labor Exchange Rate As a Cause of Inequality Growth"

Moderator: **E. Ponarin** (HSE)

The inequality growth during the last quarter century is explained as caused by a decreasing labor — labor exchange rate, i.e. devaluation of one's labor in exchange for other's labor embodied in the commodities affordable for one's earnings. We show that the productivity growth allows employers to compensate workers with always a lower labor equivalent, i.e., in a sense increasingly underpay works, maintaining however an impression of fair pay due to an increasing purchasing power of earnings. This conclusion is based on the OECD 1990–2014 data for G7 countries (Canada, France, Germany, Italy, Japan, United Kingdom and United States) and Denmark (known for the world least inequality). Finally, it is shown that the dependence between the degree of inequality and the degree of decline of the labor — labor exchange rate is statistically highly significant.

“Trust, Cooperation, and Development: Historical Roots”

Moderator: **E. Ponarin** (HSE)

There are regions, countries, even continents where, for decades, efforts to galvanize development have resulted mostly in disappointment. Such places are unresponsive to measures that stimulate production and trade in other places. In some cases, the basic reason lies in lack of resources and/or inhospitable climate. But in a many other cases, the main source of the problem is that complementary factors are missing. Commonly the missing factors include adequate interpersonal trust. In Italy, for instance, the Mezzogiorno remains chronically underdeveloped because of low interpersonal trust; this condition deters private investment and causes outflows of human capital. In India, cities without a history of commercial prominence are more likely to experience intercommunal strife, which makes them unattractive to investment today. In the Middle East, the Islamic court system was openly biased in favor of Muslims, members of the dominant religion. Judicial biases reduced Muslims’ incentives to comply with

contracts, making them relatively untrustworthy as borrowers, business partners, and sellers. In the Middle East, even where essentially secular court systems replaced the Islamic system several generations ago, interpersonal trust remains low. This is among the deep reasons why its development record has been disappointing in spite of abundant natural resources.

Session Te-05

Honorary lecture by Christian Welzel (HSE, Leuphana University) “Democracy Betrayed: Why People View an Undemocratic Situation as Democratic”

Moderator: **M. Mikucka** (Universite catholique de Louvain)

Despite the fact that people in most countries of the world say that they prefer democracy, in some countries many of these alleged supporters define democracy as its opposite: autocracy. Usually, this pattern is typical of authoritarian states, which suggests that these regimes are legitimate because overt democrats consider them as democratic, despite the fact that they are not. These insights shed another light on the recent debate about the merits of formative and reflective measurement. Had we followed a reflective measurement approach, we simply had to conclude that notions of democracy are not comparable across countries and that’s where we end. All the insights of this analysis would have been left in the dark because only a formative approach to concept construction can unearth them.

Session Te-08

Honorary lecture by Francesco Sarracino (STATEC, Luxembourg) “Estimation Bias Due to Duplicated Observations: A Monte Carlo Simulation”

Moderator: **P. Meylakhs** (HSE — St. Petersburg)

This paper assesses how duplicate records affect the results from regression analysis of survey data, and it compares the effectiveness of five solutions to minimize the risk of obtaining biased estimates. Results show that duplicate records create considerable risk of obtaining biased estimates. The chance of obtaining unbiased estimates in presence of a single sextuplet of identical observations is 41.6%. If the dataset contains about 10% of duplicated observations, then the probability of obtaining unbiased estimates reduces to nearly 11%. Weighting the duplicate cases by the inversion of their multiplicity minimizes the bias when multiple doublets are present in the data. Our results demonstrate the risks of using data in presence of non-unique observations and call for further research on strategies to analyze affected data.

Session Te-09

Honorary lecture by Eric Uslaner (University of Maryland) “Trust and Corruption in Russia”

Moderator: **E. Ponarin** (HSE)

Russia is widely regarded as a society in which there is low interpersonal trust and high levels of corruption. Using a survey of 2003 Russians conducted by the Levada Analytical Center for a grant from the Research Council of Norway (NORRUSS) to the research foundation Fafo, I examine trust and corruption perceptions in Russia. For generalized trust, neither inequality nor changes in inequality were significant predictors, although having more than adequate living standards mattered a lot. Cultural influences were also important: Religious people are less trusting while people who have lived abroad are more trusting. Trust in government largely reflects attitudes toward President Putin, but also how well laws are enforced and the level of corruption. Perceptions that corruption has increased since the Soviet era reflect generalized trust, whether it is acceptable to make “gift” payments, how adequate people see their income, and the level of inequality in their oblast. Also people who identify more as Europeans than as Russians are more likely to see increased levels of corruption.

Session Te-13

Honorary lecture by Scott Frey (University of Tennessee) “Infant Mortality in the World-System: The Cross-National Evidence”

Session moderator: **R. Inglehart** (HSE, University of Michigan)

The plight of children improved dramatically over the XX Century. Infant and child mortality, for instance, declined globally over the past six decades and infant deaths have declined across countries occupying very different positions in the world-system, but considerable cross-national variation in infant mortality remains at the beginning of the XXI Century and child mortality reduction goals under the UN's 2015 Millennium Development Goals will not be met. Consider the fact that there was a 100-fold variation in the infant mortality rate across countries in the world-system in 2013: Monaco had a rate of 1.81 infant deaths per live 1,000 births, while Afghanistan had a rate of 187.5 infant deaths per 1.000 live births.

Why does infant mortality continue to vary so widely across countries of the world-system? Various explanations have been offered, but little attention has focused on examining the validity of these explanations simultaneously with recent data. This gap in the literature was addressed in a cross-sectional analysis of the determinants of infant mortality in 2010 for a sample of 144 countries. The empirical validity of four macrosocial change theories was examined: gender stratification theory, modernization theory, dependency / world-systems theory, and developmental state theory. Strong support was found for gender stratification theory: female education had a negative effect on infant mortality. Support was also found for modernization theory: as industrialization increased, the infant mortality rate decreased. No support was found for developmental state theory (the level of state intervention in the economy) and dependency/world-system theory (position of the country in relation to the core countries). Several control variables were examined (population growth and democracy, among other variables), but only Sub-Saharan Africa status proved to be an important predictor: Sub-Saharan African countries had a significantly higher infant mortality rate than their non Sub-Saharan African counterparts. Increasing gender equality seems to be the most rational means for reducing infant mortality. Implications of the results and suggestions for future research are discussed.

Martin Carnoy (Stanford University). “Is Improving Educational Quality a Viable Policy Tool for Equalizing Income Distribution?”

Many analysts since Simon Kuznets (1955) have claimed that expanding education would eventually contribute to a decline in income inequality. More recently, some have argued that improving the quality of education would do the same. However, the education is mixed on educational expansion and income inequality. Most recently, income inequality in almost all Latin American countries has declined, and researchers are arguing that this is in part due to the expansion of education and a corresponding decline in the rate of return to schooling. In this presentation, we exam these claims, focusing on the difficulties of disaggregating the effects of educational expansion from incomes policies contributing to declining or increasing income inequality. Specifically, we argue that educational expansion and improvements in educational quality may contribute to declining income inequality when other factors, such as government transfers and tax policies are working to decrease inequality. To the contrary, educational expansion and quality improvement may have little effect on income inequality when transfers and tax policies are working to increase inequality.

Michael J. Feuer (The George Washington University). “From Science to Policy: The US Evidence Movement and Lessons for Inequality Research”

Evidence of rising economic inequality in the United States is abundant and worrisome. During the past 40 years the income of families in the 99th percentile of the distribution increased by 90%, while families in the 20th percentile experienced only a 7% gain. The effects on educational opportunity, especially for disadvantaged youth, are staggering. Similar trends are discernible in other developed countries. This paper considers how research on these issues can translate to policy options. What lessons from the American experience with making social science “useful” might be helpful to other countries pursuing the challenges of inequality and educational opportunity?

Richard Murnane (Harvard). “Rising Inequality, Schools, and Children’s Life Chances in the United States”

Increases in family income inequality in the United States over the last 40 years have translated into widening gaps in educational achievement and attainments between children from low- and high-income families. The talk has three goals related to these trends. The first is to describe and interpret the evidence on trends in inequality in educational outcomes based on family income. The second is to describe the evidence on the mechanisms through which increases in family income inequality resulted in increases in inequality of educational outcomes. The third is to describe the data sources that have been important in documenting trends in educational outcomes and the explanations for these trends, and to assess the strengths and limitations of these data sources.

D. Konstantinovsky (IS RAS). “Social Inequality: From Education to the Labor Market”

The new effects in Russian education are combined with the previous and persistent ones. Therefore it is necessary to analyze the dynamics over a long period, since many problems are in fact modifications of what we had long ago. Several important problems that the post-Soviet youth faces today have roots in the Soviet past, and by this reason the results of studies conducted from the 1960s until today are presented.

It is shown that new situation (expansion of higher education plus declining of high school graduates numbers) leads to new effect: there are generally no significant differences between the intentions (in sphere of education) of young people from various social groups. Insistent striving of youth to get a university diploma and optimistic assessment of the competitive situation are expressed in these data.

However, these were only intentions. All groups of high school graduates demonstrate an increased frequency of admission to universities. But obvious differentiation is clear: the higher the status of families, the greater is the number of their children entering universities and the smaller is the number of those joining colleges and vocational schools. On the contrary, the lower the status of families, the more of their children do not enter universities but go to study in colleges and vocational schools as well. The situation has changed for the better, but inequality persists. Clear differentiation remains in all the 50-years period of the research.

The new labor market required qualified specialists. At the same time, employers need quite a number of more or less socialized young people, and such competency is considered to be a result of staying in a higher education institution. Both kinds of the labor market demand were transmitted into families, which, in turn, transmitted the demand to the educational system. Higher education responded adequately to the family demand. Universities undertook differentiation: some provide knowledge, along with socialization, confirmed by diplomas; others just give diplomas plus socialization.

Diplomas obtained in different universities have different prices in the labor market. The differentiation of universities discussed above (some provide education, others give quasi-education) may not always be very noticeable in the process of observing the educational sphere, but clearly manifests itself in the labor market. Differentiation of universities increases the social differentiation in the labor market. This effect may be particularly pronounced in the current economic situation.

On the whole, we see the following picture. Using the findings of the 50-year research it is shown that new situation has led to greater uniformity in the aspirations for education among young people and to their broader participation in higher education. However, this has not proved conducive to lessening social inequality in the sphere of education. Also, studies of the labour market testify that inequality is transmitted from educational sphere to the labour market, and the growth of university differentiation has raised inequality in the labour market.

Henry M. Levin (Columbia University). “Investing in the Higher Education of the Disadvantaged: A Benefit-Cost Approach”

Students from disadvantaged families face obstacles in reaching and completing higher education.

Even when disadvantaged students are able to enter higher education in the U.S., they are unlikely to complete a degree. Most such students seek a 2 year, associate degree from a local community college with the hope of transferring to a 4 year university to complete the BA degree. However, less than one-fifth of such students succeed in completing the 2 year associate degree. This presentation reviews the costs and benefits of a public investment to increase the community college completion rate of the disadvantaged. As an investment there are public benefits from degree completion in the form of increased tax revenues of graduates and reduced public costs of crime, health, and public assistance. The economic benefits of this public investment are found to be far greater than their costs, contributing to greater equity and social efficiency.

Bianchi Patrizio (University of Ferrara). “Technical School, Vocational Training, Social Inclusion. A Challenge for the Europe in the Age of Migration: The Case of Italy”

Italy has traditionally been an emigration country. Since the end of XIX century to the beginning of WWI almost 15 mln people migrated from Italy to the Americas. After WWII migration flows moved from South Europe to northern countries, and then from Southern regions to the restricted industrial areas of Italy. This established a culture of migration.

A new story started in 1980. Italy became a country with a positive migration rate; in the 1980s limited flows from mediterranean countries like Morocco and Tunisia, and Philippines, a catholic country, started arriving. In the 1990s massive flows arrived from Post-Communist countries. Over the last 15 years refugees have been flowing from Mena countries uprisings (Middle East and North Africa), but most of these people travel to transit through Italy toward northern Europe countries.

Today in Italy we have to manage long term immigration, with a view to being integrated in the Italian society (5,2 mln people, 8,2% of Italian citizens), and a flow of

250,000 people from North Africa through Lybia, and from Syria, Iraq and Afghanistan through Balkan routes.

In both cases, school and vocational training are crucial instruments to face the two interrelated and at the same time different crisis.

In the case of refugees it provides the minimum linguistic instruments to face the transition to a new life.

Long run migrants are a different case, being technical school and vocational training TSVT the main tool for integration of migrants in Italian society nowadays.

Data explain clearly that immigrants have a higher probability of 1–2 years of delay in study careers, due essentially to scarce linguistic competences. Data explain moreover that foreigners also have an higher barrier to entry labour market, and in any case to enter high competence market.

Emilia-Romagna is the region with the highest level of long term immigration, with a 15% of enrolled foreign students. Foreign students are essentially oriented toward technical schools (central state-managed) and vocational training (regional administrations-managed), where foreign students reach up to levels from 30 to 50% of total enrolled ones.

Region Emilia-Romagna, by means of European resources, has promoted a reform of TSVT, inducing a strict cooperation among national and regional education centres and local authorities in order to reduce dispersions and delays of young immigrants, through a system of interaction school/companies in order to insert students in labour pathways, while, at the same time, strengthening linguistic competences, to accelerate social integration. Nevertheless, immigrants today, and in particular those who were born in Italy, are essentially coming from east european and western mediterranean countries, but now we have to face the entry of Mena countries refugees, and among them an increasing number of people with a tendency to remain in Italy.

The Emilia-Romagna experiment becomes therefore crucial first of all for establishing a new culture of migration, in a country with no tradition of immigration, and secondly it represents an opportunity to define a manageable policy of integration of immigrants in Europe.

Andy Green (University of London). “Education, Skills and ‘Pre-Distributive’ Social Policy”

Education and training are the key determinants of future life chances for individuals and a primary societal mechanism for the reproduction of social stratification across generations. The form of the education and training system in a country will substantially determine the way skills are distributed throughout society and the levels of inter-generational social mobility. The distribution of skills is a significant factor in determining the distribution of adult earnings and therefore has an important bearing on income inequality. Hence the current policy discussions about how “pre-distributive” social policies in education and other spheres can be used to reduce inequalities in wages and incomes. This paper will use the OECD PISA and Survey of Adult Skills data to examine the variation across countries in the distribution of the literacy and numeracy skills of young people and adults, how these changes over the life course, and how the characteristics of education and training systems affect this.

Michelle Jackson (Stanford University). “Misplaced Concerns? Social Background, Educational Attainment, and the Power of Performance”

It is well-known that social background is an important determinant of educational attainment, and a prominent strand of research in the United States has established that there are significant differences in the average test scores achieved by children from different social groups (the “test-score gap”). Recent research in the United States has shown that the test-score gap between children of rich and poor families has substantially increased over the past century, while the black/white test-score gap has declined. In this paper, we ask whether changes in the test score gap are mirrored in other educational outcomes, specifically B.A. enrollment and completion, and college choice. We show that although the income test-score gap has increased, test score inequalities are in fact now less important in determining income inequalities in college outcomes than they were in the past. We also show that race inequalities in B.A. enrollment, completion and college choice have increased over the past 40 years, and

discuss why the reduction in the black-white-test-score gap has not led to increasing equality in college outcomes.

Session Vd-12/1
Economic Transformations and University Differentiation

Session moderator: **Z. Kataeva** (HSE)

K. Zinkovsky (HSE)

Exploring the Restructuring of Higher Education System: An Evidence Based Evaluation of Higher Education Institutions Passed the Process of Joining to Other Ones

T. Zotova (SFedU)

Shadow Economic Behavior in the Russian Education System: The Role of Institutional Changes

L. Filatova (HSE), **I. Abankina** (HSE), **T. Abankina** (HSE)

Budgetary Constraints and Traps in Differential Financing of Colleges

17:00–18:30
Room 309,
M-20
RUS

Session Vd-12/2
Round table “Academic Inbreeding: Pros and Cons”
Moderator: **D. Aleksanrov** (HSE)

Questions

- How important is inbreeding as employment policy in Russian universities?
- Are there long-term payoffs of inbreeding beyond short-term advantages?
- Do we need to decrease inbreeding at our universities?
- Are there feasible strategies to decrease inbreeding in our universities?

Participants: leadership and administrators of Russian universities, researchers and teachers

Section W. Economics of Sport

Moderator: **D. Dagaev** (HSE)

19 April,
Tuesday

12:00–13:30

Session Y-07

Honorary paper by Stanislav Molchanov (University of North Carolina, HSE) “Steady States in Population Dynamics”

Moderator: **V. Konakov** (HSE)

We understand population dynamics theory as the study of the random integer valued measures $n(t, \Gamma)$, $\Gamma \subset R^d$ (or Z^d), where $n(t, \Gamma)$ is the number of particles in the set Γ at moment $t \geq 0$. This particle field must be, for fixed $t \geq 0$, homogeneous and ergodic in space. Its evolution in time may include random motion in space (migration), birth and death processes, immigration, and in some cases interaction between particles. The central problem under consideration is the convergence in law of our field $n(t, \Gamma)$, $t \rightarrow \infty$, to the steady state $n(\infty, \Gamma)$.

We present seven models, based on branching random processes, reaction-diffusion equations, and so forth. We begin with the Galton — Watson process, which can be taken as a mean-field model in a spatial context. Here, the population does not die out or grow exponentially only in the critical condition that the splitting and mortality rates are equal, $\beta = \mu$. If the initial population at x is x_0 , then $En(\infty, x) = x_0$. Nevertheless, this is not a steady state because spatially clusterization occurs, that is, over time the population separates into places of higher and higher population separated by ever larger expanses of unpopulated space. Our second model adds immigration to the Galton — Watson process. Here, if $\beta < \mu$ the population will reach a steady state without clusterization.

The third model turns to the FKPP (Fischer — Kolmogorov — Petrovskii — Piskunov) equation under the critical condition that the splitting and mortality rates are equal, $\beta = \mu$. This is the only condition under which the population neither dies out nor grows exponentially. In three or more dimensions, $n(t, \Gamma)$ has a limiting distribution. The next two models have the same condition of criticality but remove the restriction to three or more dimensions by replacing the Brownian motion of the FKPP equation with diffusion with heavy tails (“migration”). Model 4, the “contact process,” is for R^d and model 5 is for Z^d . All three of these models have the drawback that stability depends on the critical condition that precisely $\beta = \mu$. Once again, a more lenient situation arises if we allow immigration. Model 6 adds immigration to model 5 and stipulates merely that $\beta < \mu$.

A different way around the stringency of the critical condition that the splitting and mortality rates are everywhere constant and equal is to allow β and μ to vary in the environment. This is model 7, which does not produce a steady state population but rather one with “happy islands” of exponential growth inside depopulated regions. However, a model with a local perturbation where $\beta > \mu$ but $\beta = \mu$ elsewhere also produces a steady state population as in models 4 and 5. This shows the critical condition of these models can be relaxed slightly.

FLOOR PLANS

9/11, Myasnitskaya st.

3rd floor

4th floor

CONFERENCE VENUES

The conference will take place at the main buildings of the Higher School of Economics. Addresses: Myasnitskaya Ulitsa, 20 and 9/11.

The parallel sessions (presentations of research papers), honorary and public lectures, roundtables, workshops and coffee breaks will all take place in these buildings.

How to get there?

The HSE campus is easily accessible by subway, with the following stations just 5–10 minutes away:

- Lubyanka (“Лубянка”) (Sokolnicheskaya red line);
- Chistye Prudy (“Чистые Пруды”) (Sokolnicheskaya red line);
- Turgenevskaya (“Тургеневская”) (Kaluzhsko-rizhskaya orange line);
- Kitay-Gorod (“Китай-город”) (Kaluzhsko-rizhskaya orange line).

Lubyanka metro station: exit to Myasnitskaya Ulitsa, which you should follow. The destination will be on your right. Estimated travel time: 8 minutes.

Chistye Prudy and Turgenevskaya metro stations: exit to Myasnitskaya Ulitsa, which you should follow towards the city centre. The destination will be on your left. Estimated travel time: 7 minutes.

Kitay-Gorod metro station: exit to Ulitsa Maroseyka, which you should follow for 100 metres, then turn right onto Bolshoy Zlatoustinskiy Pereulok (350 metres), and then bear right onto Myasnitskaya Ulitsa, which you should follow for 150 metres. The destination will be on your right. Estimated travel time: 10 minutes.
